

FinRelief AI

User Interface (UI)

A Walkthrough of the FinRelief AI Web Application Screens
Prepared for: Internal Project Reference
Version: 1.0

Introduction

This document provides a complete visual walkthrough of the FinRelief AI web application. It captures every major screen a borrower interacts with — from signing in, to managing loans, to receiving AI-generated settlement strategies and negotiation letters. Each section below pairs a screenshot of the live interface with a clear explanation of what the screen does, what information it shows, and how it fits into the borrower's overall debt-recovery journey.

The application is built with a single continuous user role — the **borrower** — who logs in once and moves freely between the Dashboard, Loan Management, Financial Health, Settlement Predictor, Negotiation Email, Know Your Rights, and History sections using the left-hand navigation panel.

1. Login Page

The Login page is the entry point to FinRelief AI. It uses a dark, professional two-panel layout: the left panel communicates the platform's value proposition — helping users "negotiate smarter, settle faster, and live debt-free sooner" — while quick statistics (a 40–75% settlement range, AI-powered strategy, and free onboarding) build immediate credibility. The right panel contains the sign-in form.

- Toggle between **Sign In** and **Register** tabs to either log in or create a new account.
- Enter a registered email address and password to authenticate.
- On clicking **Sign In**, the credentials are verified by the backend and a JSON Web Token (JWT) is issued and stored in the browser.

Once authenticated, the token is attached automatically to every subsequent request, keeping the borrower securely signed in as they move between pages without needing to log in again.

2. Dashboard Overview

The Dashboard is the borrower's home screen and financial snapshot. It surfaces the most important numbers the moment the user logs in, so they immediately understand where they stand financially.

- **Monthly Surplus** — the amount left over after all expenses, shown here as █35,600.
- **Total Outstanding** — the combined balance across all active loans.
- **Total EMI** — the sum of monthly installments across every loan, along with what percentage of income that represents.
- **Debt-to-Income Ratio** — a percentage indicating overall debt load relative to income.
- **Stress Level** — a Low / Medium / High indicator of financial stress, calculated automatically from the borrower's income, expenses, and EMI obligations.

Below the summary cards, the **Financial Profile** panel displays the borrower's monthly income, monthly expenses, and available lump sum, with an **Edit Profile** option to update these figures at any time. Further

down, the **Active Loans** table lists every loan with its lender, type, outstanding balance, interest rate, EMI, overdue months, and a calculated priority level (High / Medium / Low), so the borrower always knows which loan needs attention first. All figures on this page are recalculated fresh every time the Dashboard is opened.

Fig 2: Dashboard Overview — financial snapshot, profile, and active loans

3. Loan Management

Loan Management covers two related actions available directly from the Dashboard: keeping the borrower's financial profile up to date, and adding new loan records. Together these form the data foundation that powers every AI calculation elsewhere in the application.

3.1 Update Financial Profile

Clicking **Edit Profile** opens the Update Financial Profile dialog, where the borrower can revise their baseline financial figures at any time.

- **Monthly Income (INR)** — the borrower's total monthly take-home income.
- **Monthly Expenses (INR)** — regular monthly living expenses.
- **Lump Sum Available (INR)** — any one-time amount the borrower can put toward a settlement.

Saving these changes immediately recalculates the Dashboard's monthly surplus, debt-to-income ratio, and stress level.

Fig 3: Update Financial Profile dialog

3.2 Add Loan Record

Clicking **+ Add Loan** opens the Add Loan Record dialog, used to register a new loan against the borrower's account.

- **Loan Type** — Personal Loan, Home Loan, Car Loan, or another category selected from a dropdown.
- **Lender Name** — the name of the bank or lending institution (e.g., KISHT).
- **Sanctioned Amount / Outstanding Balance (INR)** — the original loan amount and the amount still owed.
- **Interest Rate (% p.a.)** — the annual interest rate applied to the loan.
- **Overdue Months** — the number of months the loan has gone unpaid, if any.
- **EMI (INR, optional) and Due Date** — the monthly installment amount and next due date.

Once saved, the new loan appears instantly in the Active Loans table on the Dashboard, complete with a calculated risk category and priority ranking. Every loan record is linked exclusively to the logged-in borrower's account — no other user can view or access it.

The image shows a web browser window with a dark theme. The address bar shows '127.0.0.1:3000'. The page title is 'FinRelief AI - Debt Relief & New'. A modal dialog titled 'Add Loan Record' is open in the center. The dialog contains the following fields:

- Loan Type:** A dropdown menu with 'Personal Loan' selected.
- Lender Name:** A text input field with the placeholder 'e.g. KISHIT'.
- Sanctioned Amount (INR):** A text input field.
- Outstanding Balance (INR):** A text input field.
- Interest Rate (% p.a.):** A text input field.
- Overdue Months:** A text input field with the value '0'.
- EMI (INR, optional):** A text input field.
- Due Date:** A date picker showing 'dd-mm-yyyy'.

At the bottom of the dialog are two buttons: 'Cancel' and 'Add Loan'.

Fig 4: Add Loan Record dialog

4. Financial Health

The Financial Health page gives the borrower a deeper, more detailed analysis of their debt stress and repayment capacity than the Dashboard summary alone. It opens with a prominent alert banner — in this example, flagging "Critical debt stress levels detected" with a HIGH risk tag — so the most urgent message is impossible to miss.

- Four summary cards restate **Monthly Income**, **Monthly Expenses**, **Monthly Surplus**, and **Lump Sum Payments** available for settlement.
- An **EMI-to-Income Ratio** bar shows what portion of income goes toward EMIs, with a healthy-range benchmark (below 30–40%) for context.
- A **Debt-to-Income Ratio** bar shows total debt relative to income, benchmarked against a manageable range (below 50–80%).
- An **Improvement Tips** section offers practical, actionable suggestions — such as reducing discretionary spending or contacting lenders about EMI restructuring.

This page is designed to translate raw numbers into an honest, easy-to-understand picture of financial health, paired with concrete next steps.

5. Settlement Predictor

The Settlement Predictor is the core AI feature of FinRelief AI. Using the borrower's income, expenses, and full loan portfolio, it calculates a realistic one-time settlement offer for every individual loan.

- Each loan is displayed as its own card, labeled with the lender name and a **risk category** — High, Medium, or Low Risk.
- A **Suggested Settlement** percentage (for example, 70.5% for HDFC Bank or 54% for KiSHT) shows how much of the outstanding balance the borrower should realistically offer.
- The **Recommended Amount** converts that percentage into an actual rupee figure.

- A **Potential Saving** tag shows exactly how much money the borrower stands to save compared to repaying the loan in full.

Recommended settlement amounts typically range between 40% and 75% of the outstanding balance, depending on each loan's risk profile — higher-risk, more overdue loans generally support a higher settlement ask.

5.1 AI Negotiation Strategy

Beneath the settlement cards, FinRelief AI generates a full written negotiation strategy using Google Gemini. This narrative view ties the borrower's overall financial snapshot to a concrete, loan-specific game plan.

- A **Financial Snapshot** summary restating monthly surplus, debt ratio, and stress level.
 - A **Negotiation Plan** for the selected loan — lender name, outstanding balance, suggested settlement offer, risk level, and a recommended opening approach (for example, "negotiate EMI reduction first").
 - **Key Talking Points** — practical negotiation guidance such as documenting financial hardship, requesting an interest waiver, getting settlement terms in writing, and asking for a No Objection Certificate (NOC).
 - A **Documents to Request** checklist, starting with the original loan agreement.
- A **Regenerate** button lets the borrower request a fresh AI analysis at any time.

Fig 7: AI Negotiation Strategy — personalised plan and talking points

6. Negotiation Email Generator

The Negotiation Email Generator turns the AI's strategy into a ready-to-send formal letter. The borrower selects a loan from a dropdown — for example, "Mpocket — ₹60,000" — and clicks **Generate Letter**.

- The letter opens with a formal subject line requesting a One-Time Settlement (OTS) for the selected loan account.
- It is addressed directly to the lender's recovery or collections department.
- The body states the borrower's hardship, the settlement amount being offered, a request to waive penalty interest, and a request for a No Objection Certificate (NOC) once the settlement is paid.
- A **Copy** button lets the borrower copy the entire letter instantly for use in an email or physical correspondence.

This is the kind of letter a borrower would typically need a lawyer to draft — FinRelief AI generates it in seconds, fully personalized to the specific loan and lender.

Fig 8: Negotiation Email Generator — AI-drafted settlement letter

7. Know Your Rights

The Know Your Rights page equips borrowers with the legal knowledge they need to deal confidently with lenders and recovery agents. It opens with a reassuring header — "You Have Rights as a Borrower" — explaining that RBI's Fair Practices Code and the SARFAESI Act protect them from illegal harassment.

- **No Harassment** — recovery agents cannot call before 7 AM or after 7 PM, and threats or use of force are illegal.
- **Right to Statement** — borrowers can request a full loan account statement free of charge.
- **Settlement Negotiation** — lenders may accept a one-time settlement or partial payments to close an NPA account.
- **Advance Notice Required** — lenders must give 60 days' notice before classifying an account as a Non-Performing Asset (NPA).

- **Grievance Redressal** — every bank must have a Grievance Redressal Officer, with escalation to the RBI Banking Ombudsman if unresolved within 30 days.
- **NOC After Settlement** — borrowers are legally entitled to a No Objection Certificate after full payment or settlement.
- **Property Protection** — lenders cannot seize property without following SARFAESI Act procedures.
- **Privacy Rights** — recovery agents cannot contact family, employers, or neighbors to pressure repayment.

By presenting these protections clearly, the page gives borrowers the confidence to stand up for themselves during any negotiation or recovery interaction.

Fig 9: Know Your Rights — RBI guidelines and legal protections

8. AI History

The History page is the borrower's private archive of everything FinRelief AI has generated for them — every negotiation strategy and letter, automatically saved and timestamped.

- The left panel lists **Session Logs**, each showing a timestamp, a unique log ID, and a short label such as "Gemini-generated negotiation strategy."
- Selecting a log opens its full **Session Details** in the right panel, including the complete personalized strategy text — recommended settlement targets, prioritization advice, and repayment allocation guidance.
- Records are private to the logged-in borrower; no other user can view them.

This history means a borrower never has to regenerate a strategy or letter they've already received — everything is saved and searchable for future reference.

Summary

Across these ten screens, FinRelief AI takes a borrower from signing in, through organizing their complete loan portfolio, to receiving a personalized financial health assessment, an AI-calculated settlement offer for every loan, a ready-to-send negotiation letter, and clear legal guidance — with every AI output automatically archived for later reference. The consistent dark, professional interface and left-hand navigation keep the experience simple and focused, even as the underlying analysis is highly personalized to each borrower's financial situation.
