

Phase 1: Brainstorming & Ideation

This document presents the ideation, problem definition, and customer empathy analysis for **BlogForge – AI Powered Debt Relief & Financial Recovery Platform**.

1. Problem Statement

Many borrowers who default on loans experience financial anxiety, high debt-to-income ratios, and collection calls. They often lack financial literacy to negotiate settlements or write professional hardship letters. Creditors may accept settlements but expect formal documentation.

Goal: Build an AI platform that analyzes debt, predicts settlement percentages, calculates financial stress, and generates personalized hardship letters using Google Gemini AI.

Key Objectives

- Reduce financial stress through guided settlement planning.
- Automate hardship letter generation.
- Recommend realistic settlement offers.
- Improve financial literacy.

Basic Workflow Diagram

2. Empathy Map

What the User...	Deliverable Details / Observations
THINKS & FEELS	• Wants to repay debts. • Fears legal action. • Feels ashamed. • Hopes for lower settlements.
HEARS	• Collection calls. • Credit score warnings. • Legal terminology. • Conflicting advice.
SAYS & DOES	• Wants partial settlement. • Avoids calls. • Tracks debts manually. • Searches for legal aid.

SEES	• Overdue notices. • Declining credit score. • Rising interest. • Few debt-relief apps.
PAINS	• Anxiety. • Cannot pay full balance. • Limited access to credit.
GAINS	• Settlement agreement. • Affordable payoff. • Peace of mind.

Expected Benefits

- ✓ Faster debt settlement.
- ✓ Reduced paperwork.
- ✓ Better financial decisions.
- ✓ Improved user confidence.
